| <b>Working Title</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <b>YarnLoop: Elevating Handmade Crafts to a Digital Marketplace</b> |
| <b>Brief Project Description (3–5 sentences):</b><br>(Describe the problem to be addressed and the proposed system/application or solution)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                                                                     |
| <p>A specialized web application designed to move a crochet business from social media to a dedicated platform. The system allows the artisan to manage a digital catalog, showcase high-quality photos of handmade goods, and track customer orders in a centralized dashboard. It replaces the messy process of taking orders via DMs with a structured checkout flow.</p> <p><b>Midterm Deliverables: The Foundation</b><br/>Focus: Setting up the database, basic design, and the "CRUD" (Create, Read, Update, Delete) of products.</p> <ul style="list-style-type: none"><li>● <b>User Authentication:</b><br/>Secure Login and Registration for customers.<br/>Admin Login (using a simple is_admin column in your users table).</li><li>● <b>Product Management (Admin Side):</b><br/>A dashboard where the seller can Add, Edit, and Delete crochet items.<br/>Image upload functionality (saving yarn/product photos to the server).</li><li>● <b>Public Catalog (Client Side):</b><br/>A homepage displaying all available crochet products.<br/>A "Product Detail" page where users can see a larger image and a full description of the item.</li><li>● <b>Category Sorting:</b><br/>Simple buttons to filter items (e.g., "Plushies," "Clothing," "Accessories").</li></ul> |                                                                     |

## Finals Deliverables: The "Business" Logic

Focus: Interaction, order processing, and user experience.

- **Shopping Cart or Inquiry System:**  
A "Add to Cart" feature or a "Request Custom Order" form.
- **Order Management Dashboard:**  
A page for the Admin to see all incoming orders.
- **Order Status Toggles:**  
Buttons to change an order status (e.g., Pending → Crafting → Shipped).
- **User Profile / Order History:**  
A page where customers can log in to see the status of the crochet items they bought.
- **Search Functionality:**  
A search bar to find specific items (e.g., searching for "Sunflower" or "Beanie").
- **Final UI/UX Polish:**  
Adding "Success" alerts (e.g., "Item added to cart!") and cleaning up the CSS/Tailwind design to look like a real boutique.

### Target Users / Beneficiaries:

**The Crochet Creator:** A solo crochet creator who needs to manage their inventory, upload high-quality images of their work, and track the progress of customer orders.

**Custom Buyers:** Users looking for unique, handmade gifts who want a smooth browsing experience and a reliable way to purchase or request items.
